CCC! Streaming Media Library

Core Curriculum Content for Grades K-12

High-quality video and interactive online content for the children of the digital age.

Features of CCC! Streaming Media

- An interactive media-on-demand system: high quality video and interactive online content for children of the digital age
- A rich content and multimedia resource for educators and students to find pathways to teaching and learning for the world of tomorrow
- Powerful, multifaceted software empowers teachers to seamlessly integrate thousands of core curriculum programs into their lesson plans
- Over 7,000 titles and 100,000 teaching segments that are downloadable, with hundreds of new programs added each year (at no additional cost).
- Programs are correlated to provincial standards.
- The majority of content address the needs of K-12 students in Math, English/Language Arts, History/Social Studies and Science. Additional content covering Fine Arts, Health & Guidance, and Foreign Languages is also included.
- Can be downloaded to any computer or mobile device. Url links are available so that parents can see the content their kids are watching
- ...and much more!

CCC! Streaming Media STEM Content Library

As schools and school boards look to upgrade their curriculum to meet the new rigor of STEM, many are finding that their resources are insufficient. This collection represents content from the most respected producers in today's educational media industry including Disney Educational Productions, Nature, National Geographic, and the National Science Foundation. This STEM library is a must if you want to help reduce the pressure your teachers feel today about insuring their students are ready for college and university and the world of work tomorrow!

Here are ten reasons why CCC! Streaming Media transforms students into tech-savvy internet explorers.

1. CCC! Digital Content lets students explore.

All the content available to students in our library is created specifically for education and is student-centred. You can tailor search options to meet the needs of specific age ranges.

2. CCC! Interactive Content gives students freedom and choice.

They can choose what they watch and for how long they watch it.

3. CCC! puts students in charge.

The Digital Director feature allows movie-making and playlist customization.

4. CCC! engages and holds students' attention.

All of our programs are 20-30 minutes in length and are segmented into 2-5 minutes "chunks".

5. CCC! uses quality, story-like animation for young learners.

Producers like Weston Woods and programs like The Time Compass use stylized, and high-calibre graphics, humour, and a personable narrator to spark new interests, teach concepts, and promote further exploration.

6. CCC! keeps students motivated.

Each program has suggested and related videos based on the student's selection. Tools like these can be a great foundation for helping create lifelong learners.

7. CCC! lets students get to the "good stuff" quickly – just as they would a game.

Simply by logging in, students have access to the library and to the answers their curious minds crave.

8. CCC! is responsive to what students are looking for.

Each time they open a video, they are getting their questions answered.

9. CCC! surprises students with new content every September – it's never the "same old, same old."

Each fall, we update our library with fresh material and award-winning programs.

10. CCC! Is user-friendly, easy to navigate, and inviting.

Students can begin using it right away. Because they are accustomed to technology, they find that they can delve into and discover content almost immediately.

BACKYARD BUGS AND OTHER ANTHROPODS (CC)

With Sean Roach

Insect Life Processes (cc)

Five species: ant lion, mantis, walking stick, luna moth, and hickory horned devil (regal moth larva) are shown to introduce basic insect life processes such as metamorphosis, molting, reproduction, physiology, camouflage, and predator-prey relationships.

Bug Biodiversity Helps Humans (cc)

Bugs are scientifically a special type of insect, but many people apply the word to all arthropod species. This program shows how arthropod biodiversity actually helps humans. Insects as diverse as cockroaches and honey bees, as well as other arthropods such as millipedes and centipedes, are shown to be both decomposers and producers, functions that are essential to the health of our planet and ourselves.

Spider & Insect Adaptations (cc)

The biodiversity of arthropods is revealed in the great variety of their adaptations. Arachnids such as spiders have amazing adaptations: speed, size, silk webs, and venom, that make them efficient predators. Insects also have many adaptations such as incomplete and complete metamorphosis, eyes and breathing apparatuses that help them live both below and above water's surface at the same time, and other fascinating features.

DNA: READING THE BOOK OF LIFE SERIES (cc)

An exceptional miniseries of four science and social science programs about two of the most important human discoveries. The first 3 programs cover the scientific process that immediately preceded and then occurred during the Human Genome Sequence Project. These programs trace the science and some implicit social-historical implications of these advances in our knowledge about human DNA and genetics, the basic book of all physical life on our planet.

DNA Scientific Tricks & Discoveries 1960's – 1990's

Traces this period's history of research about DNA, with Nobel laureates and other scientists. They started with fragmenting experiments using restriction enzymes, get electrophoresis, and genetic maps of chromosomes, discovering genotypes and DNA fingerprinting. These had their first practical applications in being able to correctly identify crime perpetrators

DNA: The Human Genome Project Race (cc)

Compellingly traces the dramatic history and exciting process of sequencing the complete DNA Genome of human beings. Without the amazing synergy of advanced knowledge in genetics with the development of super-computers, this 21st century project could never have succeeded. Many of the most important public and private institutional scientists are portrayed and interviewed, including Francis Collins (head of the public team) and Craig Venter (head of the private team).

DNA: Understanding the Genetic Book of Life (cc)

This program shows the science behind genomics - the study, comparison and experimentation of genes within or among species now made possible by the history-making breakthrough of the Human Genome Sequence Project's success. The various scientific steps from reading the genetic book of life to actually manipulating the functions of genes are stunningly revealed.

Wildlife

On the Wings of the Monarch

The monarch, known as the King of the Butterflies, goes through 4 life cycles, the egg, the larvae (caterpillar), the pupa (chrysalis), and the adult butterfly. In March and April, the eggs are laid on the milkweed plants in North America. However, monarch butterflies cannot survive cold weather, so they migrate in October, or sooner, to Mexico and southern California. Monarch butterflies are poisonous, but not to humans. The chemicals from the milkweed plant they eat gives them a poisonous defense against predators, like frogs, birds, mice, and lizards. The adult monarch, returning North from Mexico, will only live a few months. (50 minutes)

Culture

The Heritage of Chinese Culture and Dance

Built on traditional aesthetics, Chinese dance was once passed down among the people, in imperial courts and through ancient plays. Over thousands of years, it has been constantly refined, eventually developing into the vast and distinctly Chinese dance form that we know today. With beautiful sights and sounds, this series provides a rare glimpse into Chinese culture through the introduction of seven representative dance forms. It traces the historical, geographical and religious roots of the dance traditions in China and explore the important issues, such as what inspires people to create dance, how contemporary artists breathe new life into the dance traditions and what the distinguishing features and techniques are in each of these dance forms.

Classical Dance-Dunhuang

Dunhuang Dance is a form of Chinese dance that draws sources from body movements depicted in artifacts found in Dunhuang Mogao Caves.

Order #68813 12 min

Classical Dance-Long Sleeve

This program provides an overview of the historical development of Long Sleeve Dance, a dance form dating back to the 7th century B.C.E, a time that is known as the Spring-and-Autumn period in Chinese history.

Order #66814 9 min

Ethnic Dance-Dai

The dance presentation titled Playing with Water allows the audience to experience vicariously the heat of the sunlight and the crystal clear water streaming through the river.

Order #66815 12 min

Ethnic Dance-Aini

Neighboring with the Dai group, Aini group lives primarily in and around mountains and canyons at an altitude of twenty-five to eighty hundred feet. They are famous for their production of Pu Er Tea.

Order #68816 7 min

Ethnic Dance-Tibetan

Combines both, Tibetan folk dance and stage dance performances of The Song of the Emancipated Serfs choreographed by XU Xiaoping of China Central University for Nationalities and Tibetan Mystery choreographed by YANG Liping (also lead dancer).

Order #68817 10 min

Ethnic Dance-Mongolian

The ethereal voice of Buren Bayaer (a legendary Inner Mongolian Singer), along with the images of yurts and running horses, brings the audience to an otherworldly setting of Inner Mongolia.

Order #68818 10 min

Ethnic Dance-Han

Han is the largest ethnic group in China, whose people inhabit the middle and eastern regions of the country. Hans folk dance tradition started on the streets in the 5th century as ritual events.

Design

DESIGN X-RAY SERIES II

From an idea to the first design of a new product, designers have their own ways of creating the art using a drawing board or a computer screen. Design X-Ray features the most important figures in the design industry. But what makes the most attractive product out of tons of good products? Now, designers have to use not only their creativity but also their thinking and problem solving skills to make business decisions. Then, how do they come up with extraordinary solutions to ordinary problems? What are the rules of creating food packaging? How does the brand development work in the digital world? What are the roles of great designers? Find out what these distinguished designers have done and how they see the world in Design X-Ray!

Passion Must Be Present

Louise Fili (Designer), Steven Heller (Designer & Author), and Seymour Chwast (Commercial Artist) were moved by their passion when they were trying to decide their career path. They also talk about what the most important element for graphic design and illustration is.

Order #46622 30 min 2015

Telling Stories through Visual

ESL

BASIC ENGLISH - CUTTING EDGE SERIES (cc)

This ground-breaking **Cutting Edge Basic English Series** designed by psychologist Eve Ash and ESL expert Dr Fran Byrnes, can be used in a wide range of language learning situations, in classrooms and for self-study. The series can be used for learners prior to using the popular **Cutting Edge English at Work Series**.

All **Cutting Edge English** programs are built on established language learning principles and methodology. At the same time, great characters in comic situations help students (and teachers) have fun as they learn.

01: Meeting People (cc)

Simple ways to say hello and goodbye, introduce yourself, and use the right body language.

Order #24614 18 min 2016

02: Family and friends (cc)

Describe family members and talk about friends and relatives.

Order #24615 19 min 2016

03: Giving information (cc)

Talk about yourself in more detail – ask for and give basic information.

Order #24616 17 min 2016

04: Thanks! (cc)

Say thanks and no thanks in different ways and reply to other people when they thank you.

Order #24617 16 min 2016

05: What do you do? (cc)

Ask and talk about jobs – what you do and what other people do for work.

Order # 24618 17 min 2016

06: A typical day (cc)

Talk about what you do everyday, what you often do and what you never do.

Order #24619 18 min 2016

07: Where can we meet? (cc)

Make suggestions about where and when to meet and give simple directions.

Order #24620 16 min 2016

08: What's happening? (cc)

Talk about what people are doing right now. What is happening at the moment?

Order # 24621 15 min 2016

09: Instructions and advice (cc)

Give and follow simple commands and sets of instructions.

Order #24622 15 min 2016

10: You choose (cc)

Choose from a number of possibilities ☐ this one or that one, these ones or those ones.

Order #24623 16 min 2016

11: Asking for help (cc)

Ask others for help, directly and indirectly, and say why you need help.

Order #24624 16 min 2016

12: How do you feel? (cc)

Talk about your feelings and why you feel that way – how do you feel about family, friends, work, and vacations

Order #24625 18 min 2016

13: Let's go (cc)

Make suggestions about what to do or where to go. Accept or refuse an invitation.

Order #24626 16 min 2016

14: How was your week? (cc)

Talk about things that happened in the past – this morning, yesterday, last week, last month.

Order #24627 18 min 2016

15: Comparing (cc)

Talk about what is the same and what is different – which is better, which is more important?

Order #24628 17 min 2016

16: Do you like them? (cc)

Talk about what you like and what you don't like, and ask other people what they like.

Order #24629 17 min 2016

17: Be Careful (cc)

Give warnings. Talk about what is safe or unsafe, and why.

Order #24630 19 min 2016

18: Chatting (cc)

Chat with friends and people at work – what can you chat about; what questions could you ask?

Order #24631 19 min 2016

19: Can I help? (cc)

Offer your help to other people – ask how you can help, ask what you can do. .

Order #24632 18 min 2016

20: What are you going to do? (cc)

Talk about plans for the future. What is going to happen – later today, tomorrow, next week, next year?

Addiction

ADDICTED TEENS

Takes an in-depth look at teen addiction. It provides a personal connection with addicts, abusers, families and those in recovery. It talks about the risks of trying drugs, an honest look inside substance abuse and the steps towards recovery. Teens and real experts (recovering addicts) discuss their experiences with drug addiction and ex-addicts provide views of their daily battle with addictive behaviour and how they changed their lives around. It delivers an unforgettable message that will make teens reconsider their next hit and reinforces how addiction can happen to anyone. Illicit drugs include marijuana/hashish, cocaine (including crack), heroin, hallucinogens, inhalants, or prescription drugs used without a prescription. These drugs are chemicals, and while each drug produces different physical effects, all abused substances share one thing in common. They hijack the normal function of the brain and change the way the brain responds to issues of self-control, judgment, emotion, motivation, memory and learning. Drugs change the signals coming to and from the brain. Although this can cause temporary euphoria it can also cause hallucinations, anxiety, paranoia and uncontrolled behaviour.

Drug Addiction

Addicts tell their stories of abuse, recovery & how they turned their lives around why would someone take drugs in the first place and why do some users get addicted to drugs and some don't? How does addiction happen? What is it about drugs that can take you down a path of self-destruction and self-hate? Let's find out.

Greenhorn

Greenhorn is a powerful film that gives human dimension to the Holocaust. It poignantly underscores our flawed humanity and speaks to the healing value of friendship. *Greenhorn*, adapted from the children's novel of the same name, is based on the true story of an 11-year old Holocaust survivor named Daniel who arrives at a Brooklyn yeshiva in 1946. He is befriended by Aaron, a boy with a stutter, and the two of them stand up to the bullies who make fun of them—Aaron because of his stutter and Daniel because of the small box (his only possession), with its terrible secret that he won't let out of his sight.

Daniel, the young survivor, rarely talks, but the narrator, a stutterer who bears the taunts of the other boys, comes to consider Daniel his friend. The mystery of what's in the box propels this short film, but it's in the complex relationships of the school boys that the human story is revealed.

In the end, Aaron, the stutterer, finds his voice and a friend in Daniel, and their bond offers hope for a future life of dreams realized, one in which Daniel is able to let go of his box.

THE COMPLETE ANTI-BULLYING KIT

How To Stamp Out Bullying at School & In the Classroom

This collection gets to the underlying causes of bullying in the classroom. Host Keith Deltano uses serious comedy to show students why they do what they do, how to change their behaviour as well as the tools and resources to ignite powerful dialogue and prevent bullying in the classroom

Anti-Bullying Scenarios Play-by-Play:

10 Powerful Messages with Follow-up Questions

This program shows students how they can change their behaviour. It defines the four forms of bullying - physical, verbal, exclusion and online - and encourages bystanders to be upstanders. It challenges students to take a stand against hate, racism and intolerance. Students will learn how much damage they can do to others and themselves through the misuse of social media. They will discover that much of what they put online is permanent and that cyber bullying is a prosecutable offense. It takes a look at the different roles of the victim, bully and bystander, along with actual ways the bystander can intervene and how the victim can stop being a victim. Deltano challenges viewers to contemplate how they view each other. The scene "Labels Lie" is about acceptance. It shows students how to make new friends by reaching out and encourages students to stop judging each another by appearance, speech, or economic status. It talks about trash throwing and trash catching, haters and hate catching, bullies and bystanders and takes the unusual approach of addressing the mindset of the bully as well as those being bullied.

How to Bully Proof Your Classroom: Strategies for Teachers

An ideal tool to empower teachers, this workshop gives teachers, administrators and district supervisors, simple strategies they can use to reduce bullying in their schools. Educators will learn how to break down social hierarchies and cliques, how to help excluded students become included and how to deal with online bullying. Administrators and teachers will learn a simple system and how to empower other parents and students to live a bully free life.

How to Bully Proof Your Teen: Strategies for Parents

Empowers and educates parents to help build resilient teens and teaches them how to handle bullying situations. They will learn how to teach a non-emotional response when dealing with a classroom bully as well as strong character building skills to "bully proof" their teen. It shows parents how to deal with classroom drama, texting and social media sites such as facebook and instagram. Parents discover how to monitor, use technology and control the use of social media in their home and how to monitor and limit the amount of time teens spend on social media sites.

Gender

My Transgender Life

A moving documentary on what its like to be transgender, to grow up in the wrong gender and eventually transition to a different sex. A documentary designed to record, share and celebrate the personal stories of transgender women and men and their stories of struggle, of courage and of triumph. Though they vary in age, ethnicity and socioeconomic backgrounds, each person has fought to cast off the gender assigned to them at birth and embrace their true selves. This program covers what its like to grow up in the wrong gender and eventually transition. The decision to transition from one gender to another is a life changing one not just for the transgender person but for their family and friends. Male or female, boy or girl? Most of us can answer that question without a second thought, but for some people, the answer isn't so simple. This documentary takes us firsthand into the lives of seven people who are transgender, revealing their struggles and life changing transitions. It takes a powerful look at this new generation, exploring the medical possibilities, struggles and choices transgender teens, adults and their families face today. Encouraging classroom discussion, this program helps students to think of the differences in each of us in a positive way, breaking stereotypes, acceptance, challenging prejudice and increasing visibility for the transgender community.

History

Ancient India - Art & Heritage Series

Historical documentaries that teach the heritage, history, religion, architecture and ancient customs of India 3 part Series

The Buddhist Caves of Ajanta - History & Mystery

The Buddhist Caves of Ajanta, located in Maharashtra, were built from 200BC to 600AD, almost 300 years after the death of The Buddha. These caves and sculptures, carved out of solid rock were beautifully sculpted and painted over a period of 800 years. For almost 1200 years however lay abandoned and forgotten. Though initially conceptualized to house monks, they developed over time to display some of the finest examples of rock-cut temples in the world. A pioneering wonder of Asia, this program takes us back in time and captures the changing life forms, art, culture, architecture and culinary rituals of this period. Feel the peace and tranquility of this ancient monastery while watching breathtaking images of cave paintings and sculpture.

Military

Lieutenant Colonel William Edwin Dyess & The Greatest Story of the War in the Pacific

This astonishing, yet true action adventure documentary is told through the eyes of Lieutenant Colonel William Edwin Dyess, one of the World War II's most extraordinary, yet little-known heroes. Features the narrative talents of Hollywood Actor and U.S. Marine Corps Veteran Dale Dye ("Saving Private Ryan", "Band Of Brothers") as well as "The Voice Of The Oscars", Tom Kane as Ed Dyess. On April 4, 1943, ten American prisoners of war and two Filipino convicts executed a daring escape from one of Japan's most notorious prison camps. The prisoners were survivors of the infamous Bataan Death March and the Fall of Corregidor, and the prison from which they escaped was surrounded by an impenetrable swamp and reputedly escape-proof. Theirs was the only successful group escape from a Japanese POW camp during the Pacific war. Escape from Davao is the story of one of the most remarkable incidents in the Second World War.

MARK IT - SERIES 2

This series explores new marketing and media concepts that are revolutionizing the way we consume and create advertising: from online and mobile marketing to the power of creativity.

Entertainment: Music

Due to the development of the Internet, the music industry has been growing quickly. There are some innovative artists who have successfully engaged with audience such as Lady Gaga and Beyoncé. Since anyone can create music with inexpensive equipment now, consumer-generated content is also getting popular and sometimes creates a music brand.

Order #46600 24 min 2014

Entertainment: Movie

Before, audiences relied on one-way broadcasting but now they are interacting and giving feedback via Internet. Find out how Batman and The Simpsons Movie successfully held audience's attention even before the films were released. Will traditional TV survive as the on-demand platform grows?

OH MY GOD SERIES – SEASON 3 (CC)

Oh My God! Is an entertaining and insightful look at the spiritual teachings, customs and daily lives of families of different faiths. Viewers follow Tevya Heller on a delightful journey as he experiences a vast array of traditions and social activities with the help of teen guides who discuss what it means to have faith — and how to have a little fun along the way! Oh My God! presents a lively dialogue with teens through an ‘in the moment’ lens offering a light-hearted and honest look at faith, culture and how the youth of today view their spiritual education as an integral part of who they are.

Rastafari (CC)

Dreadlocks. Reggae and Bob Marley. Cannabis. Tevya meets a teenager who unlocks the truth behind the beliefs of the “Rasta”.

Order #55220 26 min 2015

Astronomy & Space

Astronomy – Discover the Alma Telescope

A large array of radio telescopes and the most powerful observatory of its kind, ALMA peers into previously hidden regions of space with unprecedented sharpness, giving astronomers extremely detailed pictures of our universe. The ALMA or Atacama Large Millimeter/Sub-millimeter Array uses radio telescopes to operate in the radio frequency portion of the electromagnetic spectrum to detect and collect data. Radio telescopes are typically large parabolic dish antennas used in an array.

SHOW ME SCIENCE ADVANCED: ASTRONOMY & SPACE

X-Ray Invisible Astronomy

Much of the cosmos cannot be seen through optical telescopes. But it can be detected in wavelengths of the electromagnetic spectrum ranging from gamma-rays, through x-rays and ultra-violet to infra-red and radio. They reveal cauldrons of starbirth, exploding stars, neutron stars and black holes. Most exciting are Gamma-ray Bursters – cosmic flashes as bright as a million trillion Suns. In this program, we learn more about visible light (7 colors and gradations) and infra-red light (outside the scope of human visibility) along with extraordinary images of atmospheric and galactic events.

Order #68714 11 min 2014

Telescope New Eyes On The Cosmos

For many years the Hubble Space Telescope has collected breathtaking images of the cosmos with remarkable clarity. Now, ground based telescopes are fighting back. They are combining the sight of several instruments and correcting atmospheric shimmer. This program presents and explains the designs, uses and output of different types of telescopes used to see our universe. From the Keck in Hawaii, the Very Large Telescope in Chile and OWL, the Overwhelmingly Large Telescope.

Order #68715 11 min 2014

Far Out - Measuring The Universe

How far is a star or a galaxy? Scaling and measuring the cosmos is a complex problem. Scientists are integrating mathematical applications and scientific technology to create standards. Distances are so vast they are described in light years – the distance light travels in a year. Nearby stars are measured by trigonometry – the technique of parallax. Farther out, astronomers use so-called “standard candles”, the ‘Type Ia supernovae’ is the standard candle basis. Beyond that the electromagnetic “redshift” of galaxies reveals their distances.

Order #68717 11 min 2014

The Big Bang & Black Holes - Zero To Zillions Theory

This programming explores theories of the Universe exploding from an infinitesimal speck to create matter, radiation, time and space. In the first trillion-trillion-trillionth of a second, the cosmos grew a hundred million times to less than the size of an atom. Then, in another instant, the Universe was the size of a galaxy. Now, billions of years later and strung along vast filaments, our Universe has some 50-billion galaxies that continue to expand as stars within them are born, live and die. In the second half of this program, the creation and disappearance of black holes is explored. These occur when a massive star dies. As the star’s outer layers cascade into space, the core collapses to beyond the visible and becomes a voracious gravitational trap from which nothing, not even light, escapes.

Order #68716 20 min 2014

Yonder To Infinity - The End Of The Universe

This program discusses the concept of the expanding Universe. Calculations by astrophysicists show that the cosmos seems to be speeding up. The 50-billion galaxies thought to comprise our Universe are rapidly moving farther apart. As our Sun’s energy diminishes, scientists are working to understand the nature of space called “mysterious dark energy and dark matter” – believed to comprise 96 percent of the Universe. With each discovery made by astronomers and astrophysicists, we find there is so much more to learn.

Order #68718 11 min 2014

Pluto - The Farthest Planet

Since its discovery in 1930, astronomers have been debating the status of the tiny world at the farthest reaches of our solar system—Pluto. In this program, students are given a firsthand look at the scientific process that initially classified Pluto as a planet and then reclassified it in 2006 as a Dwarf Planet. Not all scientists are in agreement with this definition and the future may bring further reclassification. Students will learn the scientific process of categorizing a planet and about this tiny world at the farthest reaches of our solar system.

Order #68719 11 min 2014

Comet - Visitors From Space

Comets have been causing fear in the minds of humans for millennia. Now new spacecraft are giving us insights into their composition and behavior. Comets allow us to study what the solar system was like in its formative period. They orbit the Sun in the Kuiper Belt and the Oort Cloud. This program teaches students about comets and helps students understand why comets cause both fear and fascination.

Astronomy: The Very Large Array Telescope

The Very Large Array, or VLA, telescope was built by the National Radio Astronomy Observatory to investigate radio waves from a variety of astronomical objects. This enormous array includes 27 antennas that look into deep space to see quasars, pulsars, remnants of supernova, gamma ray bursts, radio-emitting stars, the sun and planets, black holes, and the hydrogen gas that constitutes a large portion of the Milky Way galaxy. This program takes a look at how the telescope works and some of the magnificent images it produces.

Physiology

SHOW ME SCIENCE – PHYSIOLOGY – THE MEDICAL SERIES

Audiology – Cochlear Implants

Approximately 12,000 babies are born annually in the United States with a hearing impairment. With impressive advancements in technology, cochlear implants are giving these children the ability to hear. A cochlear implant is a small, complex electronic device that can provide the sense of hearing to patients who are profoundly deaf or are severely hard of hearing. The cochlear implant helps patients hear by using electrodes that stimulate the remaining auditory nerve fibers in the patient's cochlea. The electrical sound information is sent through the auditory system to the brain for interpretation.

Technology

SHOW ME SCIENCE: TECHNOLOGY SERIES

Robotics - Challenges for the Future

New innovations in robotics are presented while highlighting two very unique and effective robotics challenges. For elementary school students, the KISS Institute for Practical Robotics uses hands-on robotics programs to communicate the excitement, knowledge and practical understanding of science. The DARPA Robotics Challenge is a competition of robot systems and software teams representing some of the most advanced robotics research and development organizations in the world. The robots must complete a series of challenging tasks selected for their relevance to disaster response. The importance of robotics to human safety and exploration is discussed.

Order #68788 10 min 2015

Transportation - Automotive Innovations

This program examines how automobile manufacturers are striving to improve fuel economy, reliability, handling, and comfort. Impressive new designs focus on improving safety with the emergence of intelligent transportation systems, involving advanced processes and technologies that pave the way for safer and more environmentally sustainable travel.

Order#68785 12 min 2015

Agriculture - Sustainable Farming

Farmers use a variety of advanced technologies, mechanized equipment, science based data, as well as fertilizers and pesticides to ensure a profitable harvest. More recently, advances in science has improved agricultural production by leaps and bounds in developing better products and processes that increase harvests while decreasing the negative impact on health and the environment.

Order #68786 11 min 2015

Engineering – A Look at Career Opportunities for Engineers

Engineering is a broad discipline that has a wide variety of sub-disciplines such as agricultural, aerospace, civil, mechanical, environmental, and biomedical engineering. An engineer solves technical problems by applying knowledge of science and mathematics. It requires unique skills and problem solving abilities to make an engineer a useful member of teams that work to solve technically based problems relating to social and environmental issues all over the world. Through the study, experience and application of the STEM curriculum, these professionals solve a multitude of the world's problems.
