Dewitt Jones *Celebrate!* Online Library for Educators

The Celebrate! Online Library for Educators is a one-year, unlimited access subscription to all of Dewitt Jones's films, complete with support materials, for a special price!

This collection includes Dewitt's five best-selling, full-length films, two short films, and 23 clips; his best stories from the feature films. These best-selling programs offer simple, yet powerful messages that encourage meaningful conversation, help us focus on the positive, and invite positive change.

Additionally, the library is easy to navigate with multi-level search capabilities.

To preview the library, please contact me for a link.

Dewitt Jones' programs can be used in a variety of ways:

- Administrative team building activities
 - Faculty meetings
 - Strategic planning sessions
- Leadership or character development workshops

Pricing

The subscription fee is based on the student population of the college/university that wishes to access the films.

Art & Design

DESIGN XRAY SERIES

From an idea to the first design of a new product, designers have their own ways of creating the art using a drawing board or a computer screen. But what makes the most attractive product out of tons of good products? Now, designers have to use not only their creativity but also their thinking and problem solving skills to make business decisions. Then, how do they come up with extraordinary solutions to ordinary problems? Design X-Ray features the most important figures in current design industry.

1. Friendship and Great Design

Milton Glaser (Graphic Designer), Mirko Ilić (Illustrator & Graphic Designer), and Adam Tihany (Hospitality Designer) share their stories of how they design, who inspired them, and how they came up with great ideas of iconic graphic designs and hospitality designs.

Order #46578 24 min 2014

2. Design is Everywhere

Will Wright (Game Designer), Dror Benshetrit (Industrial Designer), Tom Geismar and Sagi Haviv (Logo & Identity Designer), and Ivan Chermayeff (Designer, Illustrator & Artist) present their creative process of iconic designs that interact with people, from computer games; even an Island.

Order #46579 24 min 2014

3. Listen to Your Inner Voice

Shantell Martin (Artist), Ji Lee (Communication Designer), Chip Kidd (Book cover designer) have their own ways in finding creative solutions, not only for their work but also for their personal projects.

Order #46580 24 min 2014

4. Designers in the Pentagram

Three Partners in New York design firm Pentagram, Paula Scher, Natasha Jen, and Michael Bierut have successfully worked in different aspects of design; such as brand identity, the Android lock screen, packaging, and LED screen.

Order #46581 24 min 2014

5. Technology and Design

This episode explores the creativity of Jake Barton (Interaction Designer), Masamichi Udagawa and Sigi Moeslinger (Industrial Designer), and Dustin Mierau (Chief Design Officer at Path) and how they work on even the simplest of projects with the user in mind.

Order #46582 24 min 2014

6. Better Living through Design

Robert Brunner (Former Apple design chief), Stefan Sagmeister (Graphic Designer), and Mauro Porcini (Chief Design Officer at Pepsico) speak about how their extraordinary products were created and have connected with people.

THE EXPRESSIVE ACTOR TRAINING SERIES – INTEGRATED VOICE, MOVEMENT AND ACTING

The Lugering Method

Joan Melton, an internationally recognized actor trainer and author, interviews Master Teacher Michael Lugering in a theoretical discussion of recent discoveries in philosophy, somatic psychology, neuroscience and aesthetics that underpin the integrated voice, movement and acting method presented in this series.

Order #68772 25 min 2014

Expressive Action

“The study of acting should begin with physical action—a specialized, structured, flexible and adaptable physical action that is enlisted in the direct service of the expression of thought and feeling. I call this integrated physical action an expressive action.”--Michael Lugering. A group of actors work through a series of carefully structured exercises and improvisations that unlock the physical, raw materials that make human expression possible. Whether the actor is expressing love, loss, rage or joy, unlocking these universal will provide the building blocks for captivating and dynamic acting.

Order #68773 25 min 2014

Voice And Body Exercises

A group of actors demonstrate a series of voice and body exercises that unite a series of moving, breathing and sounding actions in an integrated full-bodied acting workout. These smart exercises do more than simply build essential skills in alignment, movement, respiration, resonance and range, but simultaneously prepare the actor for the expression of the body's richest and most powerful thoughts and feelings. The goal is the development of a flexible and dynamic voice and body that is hard-wired to express thought and feeling.

Order #68774 25 min 2014

Improvisation

A group of actors demonstrate a variety of improvisatory techniques and exercises designed to expand the actor's imagination and expressive power. Rooted in impulse, spontaneity, and creativity, the improvisations will lead you to new and unfamiliar methods of expression never thought possible and many of which you have never experienced in your personal life. These basic exercises can easily be modified and adapted for on-going growth and development. All the while, your acting repertoire increases and becomes more nuanced and sophisticated.

HOW HOLLYWOOD DOES IT: FILM HISTORY & TECHNIQUES SERIES

A look at the history, techniques, movements and people who create the magic of film.

Film History & Techniques Of Early Cinema

This program looks at the very birth of cinema in the late 1800's through the talkies in 1928. The dawn of the moving image began early in the 19th century. George Eastman, of Eastman-Kodak fame, created a celluloid film stock that could be wound on a reel, resulting in the first actual example of moving images on film. Experiments in the 1890s by W.K.L. Dickson and William Heise, under the auspices of the Thomas Edison Company, resulted in the invention of the Kinetograph, a vertical feed camera which exposed film and had a row of sprockets on each side of the celluloid strip. Featured are early films from Thomas Edison, The Lumiere Brothers and George Melies.

Order #68759 26 min 2013

Film History & Techniques Of The Golden Age Of Cinema

This program focuses on the classical Hollywood era of the 1930s through the 1950s. The hosts discuss and present clips from some of the films which made this era of Hollywood so memorable including the musical Dixiana, the western (Fighting Caravans), A Star is Born, The Vampire Bat, The Little Princess (Shirley Temple), Father's Little Dividend with Spencer Tracy and Elizabeth Taylor.

Order #68760 27 min 2013

Film History & Techniques Of The Directing Process

The director is responsible for the overall feel and look of the film and decides on the use all of the other process of movie making. Explore films from major directors of cinema and learn how a script is formatted. Includes the opening scene from the Howard Hawks film His Girl Friday, Stanley Donen, the 1951 musical Royal Wedding, Vin-cente Minnelli, comedy film Father's Little Dividend, Frank Capra, 1941 film, Meet John Doe, John Huston, 1953 film Beat The Devil and Michael Gordon's 1950 film, Cyrano De Bergerac.

Order #68761 26 min 2013

Film History & Techniques Of The Editing Process

The editing process takes the raw footage from the camera after it is developed, selects the shots and combines them into sequences which will themselves be combined to create an entire motion picture. Deciding which shots to use and their length requires creativity and discernment. This program features a long take, from the 1950 film Cyrano de Bergerac, Establishing shot, from the 1937 film A Star is Born, A point of view shot, when the camera replaces the eye of the character and we see exactly what the character sees - the opening of Naked Kiss from 1964 and cutting on action, from John Houston's 1954 film Beat the Devil.

Order #68762 28 min 2013

Film Studies

Film History & Techniques Of Mise-En-Scene

Mise-en-scene looks at how filmmakers make decisions about what is put before the camera. It includes costumes, props, set design, positioning of actors and much more. Mise en scène is a term that refers to all visual elements that appear within each frame of a motion picture. The concept of mise en scène for film shares a lot with theatre production in that props, sets and blocking of actors are all deliberately chosen for particular effects, although the physical space of the stage and theater often limit or dictate how mise en scène is perceived by an audience.

Order #68763 28 min 2013

Film History & Techniques Of Documentary Filmmaking

Documentary talks about some of the different styles of documentary filmmaking from the birth of cinema to the present day. With the birth of cinema in the 1890s, spearheaded by America's Thomas Edison and France's Louis and Auguste Lumiere, filmmaking progressed in two directions. Edison brought his subjects before a stationary camera to his tarpaper-covered studio called the Black Maria partly because the camera required multiple people to move it. The Lumiere brothers created the cinematographe. The resulting camera mobility allowed people to go out into the world and both document events and project films. Included are a number of clips from classic documentary films.

Order #68764 28 min 2013

Film History & Techniques Of Genre

Genre explores what characteristics indicate a film genre like horror, musical, Western and comedy and how viewers understand the story put before them. Most film critics agree on ten film genres: action-adventure, comedy, costume films, epics, horror, musical, science fiction and fantasy, suspense, war, and the western. This program discusses the following films and the genre of each

Order #68765 26 min 2013

Film History & Techniques Of Lighting

This program focus's on lighting and how a cinematographer and lighting engineer work together to showcase what is put before the camera. It discusses what tools are used to create different lighting set-ups and uses a number of examples to illustrate how this important element is decided. Lighting design falls into two categories, High-Key lighting and Low-Key lighting. High-Key lighting provides relatively bright, even illumination of the film frame or scene, the kind the director and producer of a big-scale musical productions may choose. Low-key lighting is focused lighting with strong contrast. Low-key lighting works well in horror films, or any film in which a director wishes to create suspense or keep you guessing what is in the dark, inky shadows on the outskirts of the frame.

Order #68766 27 min 2013

Film History & Techniques Of Cinematography

This segment will focus on cinematography, or camera work and how this tool helps in the creation of the story. The role of the camera operator, or cinematographer, can be highly artistic while simultaneously requiring significant scientific and technical knowledge to be performed well. In the first decade of motion pictures, the role of the cinematographer or camera operator and director were one and the same, but as cinema evolved, the duties of the director and cinematographer diverged. In this program we review Academy Award winner, James Wong Howe, who pioneered dollying and handheld camera techniques as well as the use of unconventional light sources. We take a look at his 1938 film Algiers, which focused on the moving camerawork.

Order #68767 26 min 2013

Film History & Techniques Of Sound

This program will focus on sound design and how life can be breathed into a project through the use of carefully selected and carefully placed sounds. When we think about or talk about them, we can categorize all sounds into one of three categories: dialogue or voice, music, and sound effects. Music is quite often not part of the film itself, but a musical track that adds to the mood of the film. Both music and sound effects are usually classified as either diegetic (sounds occur inside of the film's action) or non-diegetic (sounds are those which do not occur within the film).

Order #68768 27 min 2013

Film History & Techniques Of International Cinema

While American cinema has had a wide-spread influence on world popular cultures almost from the beginning, many other nations have had significant national film traditions that have also had an influence. We're going to concentrate on some of the most influential world film movements and filmmakers since the beginning of cinema. Includes some of the major foreign film movements, such as Italian Neo-Realism and French New Wave.

Order #68769 27 min 2013

Film History & Techniques Of Animation

This program looks at animation, a style of filmmaking that gained popularity during the silent era of the 1920s and has remained extremely popular from the 1930s to the present day. Animation still remains a labour-intensive and time-intensive process as the artists and crafts people behind contemporary animated programming are still essentially applying the same processes as the early animation pioneers - two frames per image, holds and cycles and synchronization. This program includes two practical animated tutorials as well as some classical animation from the early 1900s.

AD FACTORY SERIES 2

Peek behind the screen to reveal the inner workings of television's most influential and interesting advertisements. Each episode approaches three to five different advertising campaigns. Delving into the creative process, the series will seek to understand the soul behind an advertisement by interviewing creative directors, copy and art editors and others responsible for bringing the ad to air.

Ad Factory 2 - Canvas (NYC)

Grand Central Terminal, Gramercy Park Hotel, Smithsonian Channel, Showtime

Canvas created an official app for Grand Central Terminal to promote retail stores in the building. Gramercy Park Hotel's new web site using the interactive media showed various features of the hotel effectively. Smithsonian Channel embedded an interactive game on its web site to promote new TV shows. The responsive design for Showtime made its web site more organized and interactive from sports fans' point of view.

Order #46586 24 min 2014

Ad Factory 2 - Conversation (NYC)

Popchips, Hometown Buffet, SUNY Plattsburgh, McGraw Hill

Popchips and Hometown Buffet's new promotions encouraged their consumers to interact with each other via the Internet. SUNY Plattsburgh's advertisement showed current students' opinions for more prospective students. Young students enjoyed the new ways of learning through McGraw Hill's digital technologies. Better Business Bureau's Gift of Trust campaign increased the amount of donation with a shoebox commercial.

Order #46587 24 min 2014

Ad Factory 2 - D & C (NYC)

Victory, Daily Note, Nike

Doubleday & Cartwright's publication "Victory" became a great resource for prospective clients to learn about their company. For Red Bull Music Academy, their publication "Daily Note" helped to spread the information and excitement. D&C's unique style of creating images of products successfully promoted Nike's Air Max series.

Order #46588 24 min 2014

Ad Factory 2 - DDB (NYC)

Phillips TV, Clorox, Volkswagen, Budweiser

Phillips TV's "Parallel Line" project brought a better cinematic experience to the viewers. DDB successfully made big buzzes through Clorox's "Green Works" project by creating art on a dirty wall and Volkswagen's "The Fun Theory" project by having various experiments that anyone can participate. DDB also produced Budweiser's TV Commercial during the World Cup.

Order #46589 24 min 2014

Ad Factory 2 - FI (NYC)

Google, Microsoft, USA Today

Fantasy Interactive created "Ramayana," which users in Asian countries can try various features of Google Chrome by playing an interactive game based on Indonesian mythology. FI demonstrated Microsoft's new platform for multi-task DJ mixing through its advertisement. USA Today's new layout provided a better experience in reading news.

Order #46590 24 min 2014

Ad Factory 2 - Framestore (NYC)

WikiLeaks, Coca Cola, QualComm

Because of its unique way of using special effects in a documentary, Framestore got attention from viewers of WikiLeaks. Coca Cola's Polar Bear commercials received many tweets during the 2012 Super Bowl. Qualcomm's Snapdragon Processor Chip commercial was produced, shot, and directed by Framestore and released in theatres and TV.

Order #46591 24 min 2014

Ad Factory 2 - Intrabrand (NYC)

Nissan, NYSE Euronext, GE, AT&T

Interbrand created a brand new image and value for Nissan and NYSC. It also demonstrated close relationships between the technologies and consumers for GE and AT&T through advertisements.

Political History

THE PRICE OF KINGS

Yasser Arafat, Shimon Peres and Oscar Arias, have each been called killers, terrorists, liars and thieves. They have started wars, dealt ruthlessly with enemies and been responsible for blood in the streets.

Through a creative counterpoint between historical 'truth' and memory, supported by powerful archival material, the series thoughtfully critiques often intractably difficult political histories. Melding archival footage with interviews with some of the most prominent and controversial politicians and activists alive, these films delve into the careers of the most divisive characters in recent political history.

This unique glimpse into the true nature of leadership discovers what made them change and turn to peace. It questions how and why some of them succeeded where others failed. The secrets, sacrifices and regrets of power are revealed through exclusive conversations with world leaders, their wives, children, closest advisors and, of course, their enemies...

Yasser Arafat

Yasser Arafat's political legacy is one marred by controversy. To some, he was a heroic revolutionary who fought for the freedom of Palestine and the rights of his people; to others he was a terrorist and leader of a corrupt state. Yet regardless of the dichotomy, Yasser Arafat's position at the heart of the Middle East conflict for over forty years makes him a character of incredible significance.

With groundbreaking access to the people who knew Yasser Arafat best; his wife, Suha Arafat, his political allies and his adversaries, the film delves into Yasser Arafat's history, the personal struggles he faced and sacrifices he made seeking to establish peace with Israel, whilst at the same time trying to build a Palestinian nation for his people.

Order #46543 62 min 2013

On Friday May 14th 1948 Shimon Peres was with the first Prime Minister of Israel, David Ben Gurion, as he declared Israeli independence. Watching the celebrations afterwards he turned to the young Shimon Peres, future Prime Minister and current President of Israel and predicted the Middle East conflict that followed.

Shimon Peres has quite literally spent a lifetime at the seat of power since that very day and with a seven-decade-long career in politics at the heart of the Middle East conflict. The second in the series of documentary films reveals the price he paid for being a leader, helping us answer the question "What is Leadership?" It's hard to overestimate the achievements of Shimon Peres as a nation builder, but in the words of the President, "What we call experience, the younger generation call a chain of mistakes". Despite winning the Nobel Peace Prize for his attempts to negotiate peace between Israel, the nation he helped to build, and its neighbors; Israel remains at war.

Order #46544 62 min 2013

Oscar Arias

In the 80s, Central America was in crisis. Wracked by brutal civil wars, death squads and militia backed by the warring Superpowers of the Cold War. Yet one man at the center of this conflict decided to take action against the chaos. 'The Price of Kings: Oscar Arias' explores the legacy of this man: the former President of Costa Rica and lone leader without an army who had the courage to forge peace with his neighbors against the will of US President, at risk to his own life and the impoverishment of his people.

Arias' diplomacy and leadership brought an end to the bloodshed, for which he received the Nobel Peace Prize and the adoration of his people. Now his controversial policy choices leave his reputation destroyed. Arias' pursuit of peace and prosperity for his people came at a significant personal cost, and his story reveals that even the best intentions can be held against you.

Religion

OH MY GOD SERIES – SEASON 2 (CC)

In our multi-cultural country, Canada is a mosaic of religions. This Canadian series seeks to connect with people of all stripes.

In this second season, Tevya Heller continues on a cultural journey in his search for God. His spiritual guides are all teenagers who help provide insight into what it means to have a little faith; whether they were born into it or discovered it on their own. By embedding himself in the lives of devout families and their cultural communities we join Tevya as he laughs, loves and learns more about himself and the world from his teen guides.

Students get a ‘fly on the wall’ front row seat to the customs and daily lives of families of a mosaic of faiths; as well as a unique personal journey. The tempo and style is fun, modern and always compelling. This is an insightful, respectful journey of truth.

Oh My God is a complete departure from any other documentary series about religion. It offers a light-hearted and honest look at faith and focuses on how the youth of today view their beliefs and culture.

Sikhism Revealed: Gurus and Sainly Warriors (CC)

At the celebration of Guru Nanak’s birthday, the founder of Sikhism in the late 15th Century, Tevya learns why Sikhs pray, how they cook “vegetarian” for the masses, and why Sikh’s consider warriors “Sainly”. The fight for the poor is a holy calling, and sword play is no joke—and Tevya is about to get his first lesson.

Order #55211 26 min 2014

Buddhism: Searching for the Buddha in Me (CC)

With more than 300 million followers worldwide, Buddhists follow a path towards enlightenment in what is as much a religion, as it is a way of life. A Buddhist Monk attempts to quiet Tevya’s mind, but first – a celebration. It’s Buddha’s birthday and Tevya is in for a food-fight and meets “The Holy Ghosts”.

Order #55212 26 min 2014

Mennonites: Off the Grid; Into the Mennonite World (CC)

Trading in his city clothes and cell phone for a black hat and plain shirt, Tevya goes off the grid into a world where technology is taboo and life is humble. Mennonites live without modern conveniences, drive horse and buggies and worship in their own devout yet simple ways.

Order #55213 26 min 2014

First Nations: From Teepees to the Sweat Lodge (CC)

Tevya goes deep into the woods to explore the spiritual ways of North America’s first Aboriginal people– the people of the First Nations. While he has seen headdresses, Pow-Wows, sweat lodges and teepees on television, Tevya knows nothing about what First Nations people really believe or what their rituals are. After meeting two indigenous teenagers, Tevya experiences some firsthand!

Order #55214 26 min 2014

Zoroastrians: World’s Oldest Religion, Modern Life (CC)

2500 years ago Zoroastrianism was the world’s most powerful religion, and a major influence on the development of Islam, Judaism and Christianity. Today it is one of the smallest, practised in only a few tiny pockets around the planet. He attends a sacrosanct New Year’s party and partakes in the sacred coming of age ceremony, Navjote, in the presence of the Zoroastrian’s most revered symbol – a fire that has been burning for 3,500 years.

Order #55216 26 min 2014

Pentecostalism: Let the Holy Spirit Flow (CC)

It is the fastest growing Christian church on earth, and here The Holy Spirit truly flows. Tevya joins the boisterous celebration of worship at a Pentecostal Revival church where speaking in tongues, writhing on the floor, and spiritual healing are all part of the faith experience. And then he’s off to Bible camp to learn how young Pentecostals really feel the spirit, get baptized, and how they pray for Tevya’s soul.

Science

Astronomy & Space

SHOW ME SCIENCE ADVANCED: ASTRONOMY & SPACE

X-Ray Invisible Astronomy

Much of the cosmos cannot be seen through optical telescopes. But it can be detected in wavelengths of the electromagnetic spectrum ranging from gamma-rays, through x-rays and ultra-violet to infra-red and radio. They reveal cauldrons of starbirth, exploding stars, neutron stars and black holes. Most exciting are Gamma-ray Bursters – cosmic flashes as bright as a million trillion Suns. In this program, we learn more about visible light (7 colors and gradations) and infra-red light (outside the scope of human visibility) along with extraordinary images of atmospheric and galactic events.

Order #68714 11 min 2014

Telescope New Eyes On The Cosmos

For many years the Hubble Space Telescope has collected breathtaking images of the cosmos with remarkable clarity. Now, ground based telescopes are fighting back. They are combining the sight of several instruments and correcting atmospheric shimmer. This program presents and explains the designs, uses and output of different types of telescopes used to see our universe. From the Keck in Hawaii, the Very Large Telescope in Chile and OWL, the Overwhelmingly Large Telescope.

Order #68715 11 min 2014

The Big Bang & Black Holes - Zero To Zillions Theory

This programming explores theories of the Universe exploding from an infinitesimal speck to create matter, radiation, time and space. In the first trillion-trillion-trillionth of a second, the cosmos grew a hundred million times to less than the size of an atom. Then, in another instant, the Universe was the size of a galaxy. Now, billions of years later and strung along vast filaments, our Universe has some 50-billion galaxies that continue to expand as stars within them are born, live and die. In the second half of this program, the creation and disappearance of black holes is explored. These occur when a massive star dies. As the star's outer layers cascade into space, the core collapses to beyond the visible and becomes a voracious gravitational trap from which nothing, not even light, escapes.

Order #68716 20 min 2014

Far Out - Measuring The Universe

How far is a star or a galaxy? Scaling and measuring the cosmos is a complex problem. Scientists are integrating mathematical applications and scientific technology to create standards. Distances are so vast they are described in light years – the distance light travels in a year. Nearby stars are measured by trigonometry – the technique of parallax. Farther out, astronomers use so-called “standard candles”, the ‘Type Ia supernovae’ is the standard candle basis. Beyond that the electromagnetic “redshift” of galaxies reveals their distances.

Order #68717 11 min 2014

Yonder To Infinity - The End Of The Universe

This program discusses the concept of the expanding Universe. Calculations by astrophysicists show that the cosmos seems to be speeding up. The 50-billion galaxies thought to comprise our Universe are rapidly moving farther apart. As our Sun's energy diminishes, scientists are working to understand the nature of space called “mysterious dark energy and dark matter” – believed to comprise 96 percent of the Universe. With each discovery made by astronomers and astrophysicists, we find there is so much more to learn.

Order #68718 11 min 2014

Pluto - The Farthest Planet

Since its discovery in 1930, astronomers have been debating the status of the tiny world at the farthest reaches of our solar system—Pluto. In this program, students are given a firsthand look at the scientific process that initially classified Pluto as a planet and then reclassified it in 2006 as a Dwarf Planet. Not all scientists are in agreement with this definition and the future may bring further reclassification. Students will learn the scientific process of categorizing a planet and about this tiny world at the farthest reaches of our solar system.

Order #68719 11 min 2014

Comet - Visitors From Space

Comets have been causing fear in the minds of humans for millennia. Now new spacecraft are giving us insights into their composition and behavior. Comets allow us to study what the solar system was like in its formative period. They orbit the Sun in the Kuiper Belt and the Oort Cloud. This program teaches students about comets and helps students understand why comets cause both fear and fascination.

Earth Science

SHOW ME SCIENCE ADVANCED: EARTH SCIENCE

Earth Science Meteorology - Mystery Of The Clouds

Clouds have an enormous influence on the greenhouse effect. This is why it is important to find out what role clouds play in the climate and how they influence the thermal balance of the earth. Meteorologists studying clouds in Europe tell us that by learning about the microphysical processes that occur naturally in clouds, researchers gain new fundamental knowledge that can help improve weather and climate forecast models. This program explores known, speculated and unknown information about cloud structures and mechanisms. The newest technology and how it works is also presented. Students will discover how scientists study cloud formation by generating artificial clouds in a laboratory. They will research how clouds originate and how they react to surrounding natural elements. They will also see how microwave radiometers, lasers and satellites are used in researching cloud development.

Order #68721 15 min 2014

Desert Sands - Dust From Africa

Sand particles from the Sahara desert have long been known to travel across the Atlantic Ocean and southward to the Amazon rain forest in accumulations called 'dust carpets'. Water molecules adhere to the sand particles to form droplets that accumulate into clouds. The mineral-enriched water falls to earth in a downpour thereby nourishing the flora below. Mongolian desert dust carpets present problems for ecosystems upon which it falls. This program explores the science behind the storms and their impact on global climate.

Order #68722 15 min 2014

The Banded Stilt - A Wetland Survivor

From time to time, even the harshest environments surprise scientists. The Australian outback is one such place. As home to a diverse group of organisms, it sometimes plays host to a distant visitor, the banded stilt. When conditions in the Australian outback are right, a distant shoreline visitor, the Banded Stilt arrives by the thousands to breed. The mystery behind this behavior was finally documented when Cyclone Bobby started a chain reaction by flooding a dry salt lake in the outback. In this program we witness how a cyclone started a chain reaction, allowing a barren salt lake to flood, ultimately supporting a new brine shrimp population. We see how the food web works, as the mysterious banded stilts take advantage of the influx of brine shrimp to the area.

Technology

SHOW ME SCIENCE ADVANCED: TECHNOLOGY SERIES

Light Wave Technology New Advances

Shorter wavelengths of invisible ultra-violet light, measured in Nanometers (nm), transport more energy than longer wavelengths of visible light. That energy is finding its way into an increasing variety of high-tech applications. The highly competitive field of computer chip lithography has chemists and physicists working with EUV – Extreme ultra-violet light technology. Chemical engineers have designed light sensitive paints that dry quickly under a high energy ultraviolet radiator. New light technologies are being used to manufacture semiconductors, lenses and many other small scale advances in nanotechnology.

Order #68728 14 min 2014

Skyscraper Reaching New Heights

Architects and construction engineers are building taller, larger and smarter by inventing new materials that are lightweight, robust and sturdy. The 21st century skyscraper is being tailored to the demands of location-specific environments and ecosystems and to anticipate extreme weather. This program centers on the construction of the Burj Dubai - the tallest man-made structure in the world. The 162 floors of the Burj Dubai soar to 818 meters.

Order #68729 15 min 2014

Glass A Window On The Future

Today's optoelectronic engineers are developing extremely thin glass that is both durable and scratch resistant. Telecommunications systems require speed and accuracy and glass is proving to be important in developing semiconductors, optical fibers, and multiplexing. Precisely engineered glass is also used in terrestrial and extra-terrestrial telescopes. The Very Large Telescope in Chile uses four individual mirrors, each over eight meters in diameter, to see the details of outerspace.

Order #68730 12 min 2014

Archaeology Technological Advances

Advanced digital technology using 3D-terrain maps, laser pantographs, digital photographs and satellite data is increasing our visual understanding of architectural structures of bygone eras. The multi-faceted world of digital archaeology aids researchers by supporting data management and by making visual presentations more realistic. The ancient city of Troy is re-discovered in this engaging program that fuses complex technology to uncover the past without damaging the local ecosystem.

Technology

INNOVATION LAB SERIES

This series unveils the secrets of creativity, design, technology and goes behind the scenes of companies that have successfully implemented cutting-edge business models. Each episode presents studies of successful organizations to prove that innovation is the engine behind successful companies.

Entrepreneurs

Gary Vaynerchuck and Tim McCollu have challenged the rules of how to produce, market and sell two historically traditional products: wine and chocolate. McCollu's Madécasse Chocolates are manufactured in Madagascar and feature a completely self-contained production chain that relies heavily on local farmers and workers. Vaynerchuck has grown his family's wine business through social media strategies.

The Art of Design

Most good design is firmly rooted in the art world. Modern mass production has made it nearly impossible to pinpoint the origin or inspiration for design of everyday objects. One company that has mastered walking the fine line between art and design is Ammunition. We talk to their creative leaders as well as the executive in charge of Design at the MOMA in New York City.

Order #46557 24 min 2013

The Googlers

We speak with several executives from Google and hear their thoughts, values and strategies behind the challenge of winning the technology battle. Through their creative risks in growing the company and a creative environment established by founders Larry Page and Sergey Brin, Google has become the top online search engine in the world.

Order #46558 24 min 2013

High Tech

California's Silicon Valley is where we find several of the world's most innovative & successful technology companies. SunTech and Complete Genomics are on the forefront of the innovative use of computing technology. Through their groundbreaking methods and designs they have harnessed computing power and applied it to creating more efficient and effective solar power generators as well as cost effective and highly accurate human genome mapping techniques.

Order #46559 24 min 2013

Connecting People

Meet the founders of two startups created with the purpose of making life easier for business and people with the help of virtual technology innovation. Dan Greenberg is the founder of Sharethrough, a company that helps brands make their videos go viral on the web. Phil Libin has started Evernote, a mobile application that helps people remember and keep track of everything going on in their lives.

Order #46560 24 min 2013

The Sharing Economy

The Mesh, Collaborative Consumption, The Sharing Economy. These social trends are at the forefront of many socially and ecologically responsible companies today. The principles of sharing and redistribution are powerful trends that include manufactured goods, specialized skills and free time. Benefits of these innovative approaches to business include: lower costs, less waste and the creation of global communities. Meet the founders of two companies that have put these collaborative values into practice: Task Rabbit and Relay Rides.

Order #46556 24 min 2013

Emotions and Memories

Jamie Wong and Anthony Marinos are 2 young professionals whose objective is to find the perfect match for people's needs when traveling and working. Through their innovative companies: Vayable and Loosecubes they have harnessed the power of community to provide unique travel experiences to consumers and to provide office space to smaller companies that need it but may not be able to afford it.

Order #46561 24 min 2013

Recycling Habits/Healthy Eating

Recyclebank and Revolution Foods are two innovative companies that focus on rewarding people for taking ecological and healthy actions. They encourage citizens to be actively engaged with good environmental and nutritional practices. This means that consumers and government save money, build community, and also earn long-term health benefits.

Order #46562 24 min 2013

Designed and Augmented Reality

Learn more about the latest trends in artificial intelligence and augmented reality. Dekko is a company that is building a disruptive high-tech platform that intends to synthesize the online world and the real world. Affectiva is a startup that uses technology to transform products, processes and lives by providing automated emotion measurement.

Order #46563 24 min 2013

The Silicon Valley

This episode focuses on the rich innovative history of the Silicon Valley from its beginnings in the 1970's as a small industrial area that began manufacturing microchips to its place today as the heart of innovation and technology. We will hear from historians from Stanford University on the development of the area as well as leaders from several of the most important companies that are located there today.
